The Latest Products and Services Available to the Industry Today

FALSE ALARM REDUCTION MODULE

The new version of FAR/EE668, a false alarm reduction module from E&E Electronic Engineering Research Inc., is based on the original DMVS concept and now offers a greater balance between protection and false alarm reduction. FAR/EE668 has been tested on actual commercial and residential accounts with a high "motion type" false alarm history, with results showing a reduction rate of 98% without recurrence.

The new FAR/EE668 is easy to install and can be added to most existing systems without sacrificing the original functions.

DIGITAL RECORDING SYSTEMS

Vicon Industries Inc. introduces two new models to its Kollector Digital Security System line: the KOL-4800 and KOL-7000. The KOL-4800 can simultaneously record and playback up to eight digital video channels. The KOL-7000 is a real-time (30 fields/second) digital recorder that can simultaneously record and playback up to four digital video channels. These units use the latest in digital video compression and recording techniques that provide extended recording times on standard hard drives, eliminating the use of tapes.

CUBE CAMERAS

Rainbow CCTV introduces four new cube cameras to its complete line of integrated CCTV products. The CB33W is a black and white model, offering a 33-degree field of view, 420 lines of resolution and 0.1 lux sensitivity for sharp images in full range of lighting conditions. The CB70W model offers the same features, but with a 70-degree field of view. For color images, the CC33W features a 33-degree field of view, digital signal processing (DSP), 380 lines of resolution and 0.5 lux sensitivity for crisp images. The CC70W is the 70-degree version. These models are also weatherproof, less than 1.75" long and include a standard mount for easy installation.
