Monitor Products

AES-IntelliNet launches IntelliGuard 7470

IntelliGuard 7470 house arrest monitoring from AES-IntelliNet is designed to be integrated with an alarm monitoring network.

The device is monitored through a radio transmitter connected to the wrist or ankle, which reports the presence or absence of the person in the home. The transceiver sends data from the wristband transceiver through the AES-IntelliNet wireless radio network to a central location.

If the individual leaves the monitoring range, a signal absent message is sent to the central monitoring station.

For more information about this product, call AES-IntelliNet at 978-535-7310 or visit the company's web site at www.aes-intellinet.com.

Monitor Products, Software

Casts International offers Castsentinel

Castsentinel from Casts International is a video monitoring software application that is PC based and is compatible with Windows platforms. The hardware and software components provide users the ability to monitor premises through an offsite PC or through a mobile phone.

A control system or server onsite is connected with up to 16 cameras. The server enables users to have functionality of a DVR. Video recording, video play back and scheduling are all incorporated into the system. When a variance is detected, users will receive an e-mail alert to a cell phone, for example, telling which camera has detected a motion. When this happens, the server begins to record the event.

For more information about this product, call Casts International at 416-657-8548 or visit the company's web site www.castinternational.com.

Control Panels, Monitor Products

Digital Security Controls announces T-Link TL300

The TL300 a universal IP communicator from Digital Security Control can communicate with control panels. The unit is incorporated into existing IP networks to create supervises security solutions between protected premises and the central monitoring station. The TL300 uses a small portion of network bandwidth and has 128-bit AES encryption. The unit can be programmed locally using Digital Security Controls LCD5500 keypad or T-Link console software over the IP network connection made directly to the communicators Ethernet port.

For more information about this product, call Digital Security Controls at 905-760-3000 or visit the company's web site at www.dsc.com.

Monitor Products, Transmission Equipment

DSC alerts over web with T-Link TL250

DSC, a division of Tyco Fire and Security, now has a way to provide secure Internet communications between protected premises and central monitoring stations. The T-Link TL250 Internet alarm communicator creates a fully supervised communication path that runs over either an existing private network (LAN/WAN) or the Internet, between the control panel and the Sur-Guard System III.

DSC releases data interface module

Digital Security Control' s PC5401 allows third-party applications to communicate with its power series control panels. The power panels interface with leading manufacturers of home and building automation products, and audio distribution systems to create seamless, fully integrated control solutions.

It is a bi-directional RS-232 interface that can accept commands and send event driven or state change commands to third-party applications and back to the control panel to create shared functionality.

For more information, call DSC at 888-888-7838 or visit www.dsc.com.

Monitor Products

Eagle Security Products adds False Alarm Terminator Advantage Plus

The Terminator Advantage Plus from Eagle Security Products is an expandable two-way audio system with 256 zones. The model 1280 features eight microphone and speaker zones. When the unit is connected to a DMP control panel, it automatically activates with the active alarm zone in listen-in mode. This model is compatible with all Terminator family speaker and microphones including surface mount, flush mount and a conformal coated outdoor microphone.

For more information about the product, call Eagle Security Products at 800-334-7188 or visit the company's web site at www.eagle-security.com.

EE Systems Group looks to reduce false alarms

Hoping to introduce a cost-effective solution for false-alarm reduction, EE Systems Group, Inc. has introduced the eFAR100 electronic false alarm reduction module, a device that fits onto standard alarm control panels. It's digital verification control technology eliminates 90 percent of the false alarms caused by PIR sensors without any appreciable degradation in intrusion detection performance, according to EESGI. It is UL 1023 approved as an accessory device.

For more information about this product visit the company's web site at www.eFAR100.com.

Monitor Products

JVC offers 40-inch LCD display

JVC announced November 17 the launch of the GM-H40L1G, a new professional LCD 40-inch monitor geared toward large-scale security systems. The 170-degree viewing angle makes it versatile enough to suit all sizes of control rooms, and it features an array of standard inputs and external controls. Further, the monitor requires no air gap at its rear, so it can be mounted flush against a wall or ceiling, even back to back. Its IR remote sensor incorporates an "Eco-sensor" that automatically detects ambient light and adjusts brightness to reduce excessive luminance, which increases the life of the unit and provides

more comfortable viewing.

For more information about this product visit the JVC's web site at www.jvcproeurope.com.

Monitor Products, CCTV Systems

OzVision announces OzLine 2CS

The Ozline 2CS from OzVision has two alarm inputs and transmits remote video images over standard telephone lines. The unit has built-in memory and sends pre and post video clips to a central station for verification. Users can dial in using the included software to view live video from any computer.

For more information about this product, call OzVision at 800-385-2317 or visit the company's web site at www.ozvision.com.

Monitor Products**OzVision unveils OzLine 2CS**

OzVision's OzLine 2CS is a two-channel video digital dialer for central station video monitoring services. The OzLine 2CS has two alarm inputs and transmits high-quality remote video images over standard telephone lines. With its built-in memory, the unit sends pre- and post video clips to the central station for verification. End users can also dial in using the included control center software to view live video from any computer.

For more information about this product, call OzVision at 800-385-2317 or visit the company's web site www.ozvision.com.

Monitor Products**Safety Vision announces SV-LCD50 Monitor**

Safety Vision's SV-LCD50 is a thin film transistor liquid crystal display designed for heavy equipment and commercial trucking industries.

When the monitor is connected to a camera with a microphone, it allows the user to see and hear activity around the vehicle.

For more information on this product, call 800-880-8855 or visit www.safetyvision.com.

Monitor Products**Samsung adds display solutions**

Samsung's SyncMaster 403t is a versatile display for a PC or a digital signage application. The SyncMaster 403t uses MagicNet software to maintain an Ethernet connection to network and control media sources and content on different displays through the network. It features Samsung's Patterned Vertical Alignment a technology in the liquid crystal cell structure for improved viewing.

For more information call, Samsung at 800-726-7864 or visit the company's web site at www.samsung.com.

Monitor Products**Signalscape launches StarWitness Freeze Frame**

StarWitness Freeze Frame from Signalscape is a turnkey video forensics workstation. Security officers and law enforcement can use the system to decipher video evidence. The video processing system features a PC, VCR, 13 inch NTSC monitor, a 19 inch flat-panel monitor and a color printer. The Freeze Frame allows the user to process uncompressed video, sharpen, zoom, and brighten the video. The system can back up and archive cases to DVD and create an audit log for cases used in court presentations.

For more information, call Signalscape at 919-859-1098 or visit the company's web site at www.signalscape.com.

CCTV Systems, Monitor Products**Speco Technologies announces LCD Monitor**

The VM-TV17LCD from Speco Technologies is an LCD monitor that features a built-in TV Tuner with IR remote control. The monitor has a multitude of inputs including A/V in, antenna/cable, VGA and S-Video. The 17-inch color active matrix TFT liquid crystal display provides a quality picture in a profile less than three inches deep. It also supports DDC 1/2B for plug and play compatibility. An advanced OSD control tailors picture quality to the job at hand.

For more information about this product, call Speco Technologies at 800-645-5516 or visit the company's web site at

www.specotech.com.

Monitor Products**Telular introduces Telguard**

Telguard TG-7 and TG-8 models from Telular transmits alarm signals to the monitoring station over next-generation GSM digital cellular

networks. The system uses a wireless network for businesses and homes that do not have traditional wire line phone service, such as Voice over Internet Protocol or cellular-only phone services. As a back-up alarm device, the units transmit alarm signals over the cellular network when the telephone line has been disrupted or disabled.

For more information about this product, call Telular at 800-229-2326 or visit the company's web site at www.telular.com.

Monitor Products, Wireless

Telular unveils digital alarm transmission for VoIP/cell users

The new Telguard Digital model TG-1 from Telular has been built specifically for end users who use VoIP and cell-only phone services. The TG-1 will transmit alarm signals to monitoring stations over GSM digital cellular networks. Home owners will get full data reporting, automatic self test and standard Contact ID alarm panel support. Additional enhancements include 128-bit AES encryption to ensure the authentication and security of alarm signals and programmable supervisory relay output.

For more information about this product, call Telular at 847-247-9400 or visit the company's web site at www.telular.com.

Monitor Products

U.S Acoustics Technologies offers standalone combination intrusion and vide

 The No False Alarm a division of U.S. Acoustics Technologies' standalone combination intrusion and video system allows a monitoring station to confirm if there is a verified or false alarm in 20 seconds from the time the camera or sensor detects motion. The system includes an eight channel multiplexer. It can work with eight cameras with variable motion detectors and sensors as well as a siren. The system connects to existing alarms, burglar panels and DVR systems. It features four TCP/IP ports. The first port records a clip after an alarm is triggered and sends the clip to the monitoring station. The second port lets viewers come into the site and view it to verify the situation. The property owner can also view it through the third port. The fourth port is used for audio and an IP server.

For more information, call No False Alarms at 510-633-5000 or visit the company's web site at www.nofalse.com.

Monitor Products

Winsted supplies new rack-mounting kit

Technical furniture manufacturer Winsted has introduced a new rack-mounting kit for use with larger LCD monitors than could previously be installed with Winsted LCD/3 consoles. The kit includes a detachable mounting bracket for LCD monitors and LCD swivel mount. Together, they allow for a more finished look, accommodating up to 21-inch LCDs when mounted in side-by-side consoles.

For more information about this product, call Winsted at 800-447-2257 or visit the company's web site at www.winsted.com.
